

Aptitude

- 1. The ratio of the age of a man and his wife is 6:5. After 16 years, the ratio becomes 10:9. Find the husband's age when the wife was born.
- 2. If Manoj lends ₹10000 to Karthik at 10% per annum and Karthik lends to Vignesh at 14% per annum, find Karthik's gain in a period of 4 years.
- 3. A man loses 20% of his money and after spending 70% of the remainder, he is left with Rs. 270. How much money did he originally have?
- 4. A defect-finding machine rejects 0.085% of all cricket bats. Find the number of bats manufactured on a particular day if it is given that on that day, the machine rejected only 34 bats.
- 5. 40 liters of mixture of milk and water contains 25% of water. When 10 liters of water is added, what will be the percentage of milk in the final mixture?
- 6. Susan and Lisa decided to play tennis against each other. They bet \$1 on each game they played. Susan won three bets and Lisa won \$5. How many games did they play?
- 7. If machine A polishes x units in 12 minutes and machine B polishes 5x units in 40 minutes, in how many minutes will A and B, working together, polish 50x units.
- 8. Set A comprises all 3-digit numbers that are multiples of 6. Set B comprises all 3-digit numbers that are multiples of 4 but are not multiples of 8. How many elements does (A U B) comprise?
- 9. In an examination, 80% of the students passed in English, 85% in Mathematics, and 75% in both English and Mathematics. If 40 students failed in both subjects, find the total number of students who appeared in the examination.
- 10. A box contains 2 white balls, 3 black balls and 4 red balls. In how many ways can 3 balls be drawn from the box, if at least one black ball is to be included in the draw?

Programming

Find the output of the following program.

```
#include<stdio.h>
 2
    int main() {
     float x = 0.1;
 5
     if (x == 0.1)
6
       printf("IF");
7
     else if (x == 0.1 f)
       printf("ELSE IF");
8
9
     else
10
       printf("ELSE");
11 }
```

```
int main() {
1
     int a[10] = {
2
3
       9,
4
       8,
5
       2,
6
       3,
7
       1
8
     int i, j, m;
9
       = a[0];
10
       = a[i];
11
     i
       = a[j];
12
     printf("%d, %d, %d", i, j, m);
13
     return 0;
15 }
```

```
#include<stdio.h>
2
  #include<string.h>
4
  int main() {
     char str[9] = {
       ızı,
7
       101,
8
       'h',
9
       101,
10
       'c',
11
       101,
12
       Iri,
13
       'p'
14
     };
15
     int i, j, len;
16
     len = strlen(str);
17
     for (i = 0, j = 1;
18
       (i + j) < len; i++) {
 19
       if (str[i] < str[i + j]) {
 20
          str[i] = str[i] + 1;
 21
       } else {
 22
          str[i + j] = str[i + j] + 1;
 23
       }
 24
 25
     printf("%s", str);
 26
     return 0;
27
28 }
```

```
1 #include<stdio.h>
2
3 int main() {
4 int i = 2, j = 2;
5 while (i + 1 ? --i : j++)
6 printf("%d", i);
7 return 0;
8 }
```

5. Find the output

```
1 #include<stdio.h>
2
3 int main() {
4   int i = 5;
5   printf("%d%d%d%d%d%d", i++, i--, ++i, --i, i);
6 }
```

6. Find the output of this snippet:

```
1 int a, b;
2 for (a = 6, b = 4; a <= 24; a = a + 6) {
3   if (a % b == 0)
4   break;
5 }
6 System.out.println(a);</pre>
```

Question Code: ZF23101

7. Find the output of the following program.

```
int main() {
1
     int val = 2;
2
3
    do {
4
      val++;
5
       ++val;
6
     } while (val++ == 4);
7
8
     printf("%d\n", val);
9
10
     return 0;
11
12 }
```

```
#include<stdio.h>
1
2
    void fun(int n, int m) {
3
      if (n > 0) {
4
        fun(--n, ++m);
5
        printf("%d %d\n", n, m);
6
        fun(--n, ++m);
7
     }
8
9
    }
10
   int main() {
11
   int a = 3;
12
     fun(a, a);
13
     return 0;
14
15 }
```

```
int fun(int val) {
2
     int i;
   int ans = val;
3
   for (i = 0; i < val; i++) {
4
5
       ans = ans + (val * val);
6
     }
7
     return ans;
8 }
9
10 int main() {
11
     int i[5] = {
12
       0,
13
     1,
14
      2,
   . 3,
15
16
       4
17
    };
18
19
    int n = 0;
20
    do {
      printf("%d ", fun(i[n]));
21
    } while (++n < 5);
22
23
24
    return 0;
25 }
```

```
#include <stdio.h>
2
  int main() {
     static int staticVar;
4
     int j;
5
     for (j = 0; j <= 5; j += 2)
6
       switch (j) {
7
       case 1:
8
         staticVar++;
9
         break;
10
       case 2:
11
         staticVar += 2;
12
       case 4:
13
         staticVar %= 2;
14
         j = -1;
15
         continue;
16
       default:
17
         --staticVar;
18
         continue;
19
20
     printf("%d", staticVar);
21
     return 0;
22
23 }
```
